EXPERIMENT:10

Using the tables "DEPARTMENTS" and "EMPLOYEES" perform the following queries:

a) Display the employee details, departments that the departments are same in both the emp and dept.

b) Display the employee name and Department name by implementing a left outer join.

c) Display the employee name and Department name by implementing a right outer join.

d) Display the details of those who draw the salary greater than the average salary.

[QUERY]:

```
DROP TABLE Departments;
CREATE TABLE Departments (
dept_no INT PRIMARY KEY,
dept_name VARCHAR(50),
dept_location VARCHAR(50)
);
DROP TABLE Employees;
CREATE TABLE Employees (
emp_id INT PRIMARY KEY,
emp_name VARCHAR(50),
emp_salary INT,
dept_no INT
);
```

[Inserting records]:

```
INSERT INTO Departments VALUES
(101,'HR','Delhi'),
(102,'IT','Mumbai'),
(103,'Finance','Chandigarh');
INSERT INTO Employees VALUES
(1,'Divesh',50000,101),
(2,'Sneha',60000,102),
(3,'Raj',40000,105);
```

a). Display the employee details, departments that the departments are same in both the emp and dept.

```
SELECT * FROM Employees;
SELECT e.*, d.*
FROM Employees e
JOIN Departments d
ON e.dept_no = d.dept_no;
```

emp_id	emp_name	emp_salary	dept_no	dept_no	dept_name	dept_location
1	Divesh	50000	101	101	HR	Delhi
2	Sneha	60000	102	102	IT	Mumbai

b). Display the employee name and Department name by implementing a left outer join.

```
SELECT e.emp_name, d.dept_name
FROM Employees e
LEFT JOIN Departments d
ON e.dept_no = d.dept_no;
```

emp_name	dept_name
Divesh	HR
Sneha	IT
Raj	NULL

c). Display the employee name and Department name by implementing a right outer join.

```
SELECT e.emp_name, d.dept_name
FROM Employees e
RIGHT JOIN Departments d
ON e.dept_no = d.dept_no;
```

emp_name	dept_name
Divesh	HR
Sneha	IT
NULL	Finance

d). Display the details of those who draw the salary greater than the average salary.

```
SELECT *
FROM Employees
WHERE emp_salary > (SELECT AVG(emp_salary) FROM Employees);
```

emp_id	emp_name	emp_salary	dept_no
2	Sneha	60000	102
NULL	NULL	NULL	NULL
